

## **SUDDENLY VOLCANIC ERUPTIONS AND EARTHQUAKES ACROSS THE GLOBE**

**14 JAN. 2020. RECORD NUMBERS OF VOLCANOES AND EARTHQUAKES ARE ERUPTING AROUND THE PLANET.**

**WHY ARE VOLCANOES ALL OVER THE GLOBE SUDDENLY SHOOTING GIANT CLOUDS OF ASH MILES INTO THE AIR?**

There certainly hasn't been a lack of seismic activity so far in 2020. Just a few days ago an horrific earthquake swarm hit **Puerto Rico**. Now, more than 1,000 earthquakes have rattled Puerto Rico so far, and as you will see below, it was just hit by another very large earthquake.

But right now volcanic eruptions have taken centre stage. In particular, a massive eruption in the **Philippines** is making headlines all over the world, but what most people don't realize is that several other volcanoes have also blown their tops in spectacular fashion within the past week.

**Suddenly, volcanoes all over the globe are shooting giant clouds of ash miles into the air, and this is greatly puzzling many of the experts.**

Let's review what we have witnessed over the past **7 days**.

Last Tuesday, one of the most important volcanoes in **Alaska** shot hot ash 25,000 feet into the air...

Shishaldin Volcano erupted at 5 a.m. Tuesday, the Alaska Volcano Observatory announced, and sent up an initial ash cloud to 19,000 feet. Clouds initially obscured the mountain, but satellite imagery confirmed the ash cloud, U.S. Geological Survey geophysicist Hans Schwaiger said.

Seismicity diminished for a few hours, but it then increased again. During the increase, the volcano spewed an ash cloud to 25,000 feet, the observatory announced. The later eruption increased the volume of ash.

There are 5280 feet in a mile, and so we are talking about an ash cloud nearly 5 miles high.

Then on Thursday, Mt. Popocatepetl in **Mexico** shot hot ash nearly 4 miles into the sky...Mexico's Popocatépetl volcano burst to life in a spectacular gush of lava and clouds of ash that hurled incandescent rock about 20,000 feet into the sky.

The dramatic explosion of the active strato-volcano, a little over 40 miles southeast of Mexico City, was captured on video by Mexico's National Centre for Disaster Prevention, CENAPRED.

It has the potential to create the worst natural disaster in the modern history of North America, because it is quite close to Mexico City. The following summary shows the potential threat that Mt. Popocatepetl poses ...

Approximately 26 million people live within 60 miles of Popocatepetl's crater, and so we are talking about the potential for death and destruction on a scale that is difficult to imagine.

In ancient times, Mt. Popocatepetl buried entire Aztec cities in super-heated mud, but then it went to sleep for about 1,000 years. Unfortunately for us, **it started waking up again in the 1990's**, and now this is the most active that we have seen it ever since the volcano originally reawakened.

Meanwhile, down in South America the Sabancaya volcano in **Peru** just shot a plume of volcanic ash approximately 24,000 feet into the air...

Explosive activity continues. Volcanic Ash Advisory Centre (VAAC) Buenos Aires warned about a volcanic ash plume that rose up to estimated 24000 ft (7300 m) altitude. But hardly anyone is paying any attention to what just took place in **Peru** because of **what just happened in the Philippines**.

On Sunday, **Taal volcano roared to life**, and it is being reported that the eruption sent **“steam, ash and pebbles up to 10 to 15 kilometres (6 to 9 miles) into the sky”**.

According to USA Today, **ash has already reached Manila**, and **“red-hot lava”** has started gushing out of the volcano that forced villagers to flee. .

There were no immediate reports of casualties or major damage from Taal volcano's eruption south of the capital that began Sunday. But clouds of ash blew more than 100 kilometres (62 miles) north, reaching the bustling capital, Manila, and **forcing the shutdown of the country's main airport** with more than 240 international and domestic flights cancelled so far.

Unfortunately, authorities are warning that **the worst may still be yet to come**. The Philippine Institute of Volcanology and Seismology increased its threat level for Taal Volcano to four out of five, saying that a **“hazardous explosive eruption”** could happen at any minute

We continue to see unusual earthquake activity **all over the globe**.

After already experiencing more than 1,000 earthquakes since the beginning of 2020, **Puerto Rico** was hit by a magnitude 5.9 quake on Saturday causing further damage along the island's southern coast, where previous recent quakes have toppled homes and schools.

The U.S. Geological Survey said the 8:54 a.m. (1254 GMT) quake hit 8 miles (13 kilometres) southeast of Guanica at a shallow depth of 3 miles (5 kilometres).

Many scientists are now warning that our planet is **becoming increasingly unstable** and that the **shaking is only going to get worse**.

After the events of the last few days, perhaps a few more people will start to understand what is going on. There have always been earthquakes and volcanic eruptions, but for most of our lives we have been able to assume that our planet is generally stable.

Unfortunately, **that is no longer a safe assumption**.

We have entered a period of time when all of the old assumptions will no longer apply, and **everything that can be shaken will be shaken**.

### **CONSIDER THIS PROPHECY!**

“For YHWH of Hosts will have a day *of reckoning*, against everything proud and lofty; against everything lifted up - and it will be brought low. And *it will be* against all the cedars of Lebanon that are high and lifted up, against all the oaks of Bashan, against all the high mountains, against all the lofty hills, 15against every high tower, against every fortified wall, against all the ships of Tarshish and against all the beautiful craft *and* vessels.

“The arrogance of man will be humbled and the loftiness of men will be brought low. YHWH alone will be exalted in that day, but the idols will completely pass away. *Men* will flee into caves of the rocks, and into holes of the ground, from the terror of YHWH and the splendour of His majesty, when **He arises to make the earth tremble**.” (Isaiah 2:12-19)

“Wail, for the day of YHWH is near! It will come as destruction from the Almighty. Therefore all hands will fall limp, and every man's heart will melt. They will be terrified. Pains and anguish will take hold of *them*; they will writhe like a woman in labour; they will look aghast at one another, their faces aflame.” (Isaiah 13:6-8) ahhhh!
