

Tennessee Nurses Pray On Hospital Rooftop Amid Coronavirus Pandemic

“We could feel God's presence in the wind.”

As medical workers around the globe battle the COVID-19 pandemic on the front lines, many of them are turning to their faith. As they see first hand the severity of the disease, they are turning to God to seek help. Similarly to how nurses from Vanderbilt University Medical Center in Tennessee prayed right before starting their shift.

Angela Gleaves posted on Facebook about the powerful moment. On March 30, she and her colleagues gathered on the hospital rooftop to pray over the hospital employees.

“When you have a few extra minutes at work, you take the time to go to the helipad and pray,” Angela wrote in the Facebook post. “We prayed over the staff in our unit as well as all of the hospital employees.

Hospital rooftop prayer

Angela, joined by Sarah Kremer, Beth Tiesler, Tanya Dixon and McKenzie Gibson prayed over all other medical teams across the globe.

“We also prayed over the patients and their families during this trying time,” she added. “We also prayed for all of our colleagues around the world taking care of patients.”

As the wind blew while they prayed, and they felt the presence of God.

“It felt good to do this with some of my amazing co-workers,” Angela said. “We could feel God’s presence in the wind. Know that you are all covered in prayer.”

ALARMING TREND OF WESTERN QUAKES CONTINUES AS 6.5 HITS IDAHO

By Michael Snyder/End of the American Dream April 04, 2020

Why has the western United States suddenly been shaking so violently over the past several weeks? On Tuesday, the constant barrage of headlines about the coronavirus pandemic was interrupted by an enormous earthquake that hit central Idaho.

Of course Idaho is not exactly known for earthquakes, and so this was quite a surprise. In fact, the largest quake in Idaho history was the magnitude 6.9 Borah Peak earthquake in 1983.

So when a magnitude 6.5 earthquake struck not too far from Boise on Tuesday, it really stunned a whole lot of people. And according to the Spokesman-Review, this quake could be felt as far away as Calgary...

An earthquake hit southern Idaho on Tuesday afternoon, with shakes felt as far as Calgary, Canada, Boise and Spokane.

The United States Geological Survey measured a 6.5-magnitude earthquake at a depth of 10 miles just before 5 p.m. The center of the quake took place about 45 miles west of Challis, Idaho.

This is an event that those living up in the Northwest will remember for a long time to come. There was a tremendous amount of shaking all over the region, and according to at least one report some people actually "ran outside yelling"...

An entry in Volcano Discovery said: "Sustained moderate shaking for several minutes, Rumbling sound heard, people ran outside yelling. Knickknacks fell off shelf.

"Items suspended from ceiling/beams still slightly swaying 10 minutes later."

All the way over in Helena, Montana someone described the shaking like being "on a small ship at sea during a storm", and a restaurant owner in Stanley, Idaho reported that "the water next to me is still vibrating"...

Brett Woolley, a restaurant owner in Stanley, said he heard earthquake coming before he felt it.

"I heard the roar, and at first it sounded like the wind but then the roar was tremendous," Woolley said about 10 minutes after the earthquake. "The whole house was rattling, and I started to panic. I'm sitting here perfectly still and the water next to me is still vibrating."

The epicenter of this earthquake was approximately 78 miles from Boise and approximately 330 miles from Yellowstone.

Needless to say, any major seismic event anywhere near Yellowstone is a cause for concern.

And of course this quake comes less than two weeks after a magnitude 5.7 earthquake hit near Salt Lake City on March 18th...

An earthquake struck near Salt Lake City Wednesday morning, shutting down a major air traffic hub, damaging a spire atop a temple and frightening millions of people already on edge from the coronavirus pandemic.

Though there were no reports of injuries and no damage was immediately reported in areas along the Utah-Idaho border, there was damage scattered in the Salt Lake City area -- with the earthquake showering bricks onto sidewalks and releasing a chemical plume outside the city.

In fact, that quake caused so much shaking that it actually knocked the trumpet out of the grasp of the statue of the angel Moroni...

The 5.7-magnitude earthquake that shook Utah Wednesday morning also dislodged a symbolic part of Salt Lake City's iconic Mormon temple: the trumpet of an angel statue atop its highest spire.

The temple is the spiritual focal point for the 16 million members of The Church of Jesus Christ of Latter-day Saints.

Following that dramatic seismic event, there have been hundreds of aftershocks.

And remember, this is not a part of the country that is known for lots of quakes.

According to the University of Utah Seismograph Stations, there had already been 658 aftershocks from that event as of Monday morning...

More than 600 earthquakes have hit across Utah and surrounding areas after a 5.7-magnitude quake struck near Salt Lake City about two weeks ago, according to University of Utah Seismograph Stations.

As of Monday morning, the University of Utah Seismograph Stations, or UUSS, recorded 658 earthquakes as part of a series of aftershocks.

Of course there will be plenty of aftershocks following the quake that just hit Idaho as well.

As I write this article, there have already been five aftershocks greater than magnitude 3.0 that have hit the region. By the time you read this article, that number may be substantially higher.

With all of this shaking going on in Idaho and Utah, many on the west coast may be wondering if they are next.

According to CalTech, there have been more than 1,100 earthquakes in California and Nevada over the last 7 days. A couple of magnitude 5 quakes struck off the coast of northern California during March, and that certainly rattled some nerves, but everyone understands that something far, far larger is eventually coming.

For years, scientists have been telling us that "the Big One" is way overdue and that we are not prepared for it.

And for years I have been warning people about what will eventually happen if they remain on the California coastline.

We live at a time when everything that can be shaken will be shaken. The crust of our planet is becoming increasingly unstable, and this latest earthquake in Idaho is yet another example.

In Luke 21:11, Jesus told us the following about what things would be like in the last days...

And great earthquakes shall be in divers places, and famines, and pestilences; and fearful sights and great signs shall there be from heaven.

You may have noticed that a "pestilence" is rapidly spreading across the face of the globe right now.

And at the same time, enormous earthquakes keep popping off like firecrackers with frightening regularity.

Unfortunately, most Americans don't understand the bigger picture, and what we have experienced so far is just the beginning...
